OCTOPUZ presents the latest welding enhancements at AUTOMATICA 2018

Waterloo, ON, June 19 - From June 19th to 22nd 2018, OCTOPUZ will be exhibiting at Automatica. Taking place at Messe Munchen GmbH in Munich, Germany, Automatica is the leading exhibition for smart automation and robotics.

In the OCTOPUZ booth you will be able to see a Stäubli Robot programmed with OCTOPUZ 2.0 to perform a milling application. In addition, the team will be conducting live programming demos and have on display a variety of simulations to demonstrate the range of applications and brand support. From welding to milling applications, OCTOPUZ makes complex, simple.

In conjunction with the Automatica exhibition, OCTOPUZ is excited to introduce the public release of OCTOPUZ 2.0.2!

The OCTOPUZ 2.0.2 version is focused on enhancing one of the most popular applications the OCTOPUZ software is used for, welding. One enhancement reduces the number of clicks to create a weld from 5 to 1 by leveraging the NEW Quick Weld feature, drastically increasing programming efficiency.

The addition of the Spot Welding feature expands on the OCTOPUZ welding capabilities by providing those customers performing resistance welding applications with a simplified and intuitive Offline Programming solution to help optimize robot operation times.

Continuing with the theme of delivering a best in class OLP welding solution OCTOPUZ has increased its support for Panasonic welding which has made a big splash within the OCTOPUZ customer base and industry. OCTOPUZ' full support of Panasonic Weave Welding allows the user to successfully create weave welds and program posts for Panasonic robots. With OCTOPUZ, the weld accuracy when using a Panasonic robot has also been improved by locating exact weld paths through 2-point touch sensing.

OCTOPUZ is pleased to provide you with a free one-day-ticket to Automatica. Contact OCTOPUZ to take advantage of this offer, but don't delay, there are limited passes! Register for the show and visit the OCTOPUZ booth, Hall 5 booth 519.

OCTOPUZ looks forward to seeing you there and showing you their latest updates.

- more -

Everything at Automatica revolves around optimizing your production operation. The leading trade fair features innovative automation and robotics solutions with pioneering key technologies for all branches of industry, so you can manufacture higher-quality products quicker and more cost effectively.

OCTOPUZ is a complete solution that enables users to program and generate robot code offline while visualizing their entire manufacturing process. In addition to its simulation and material handling capabilities, it can generate or import path information from Mastercam for a variety of applications including edge following, material removal and fabrication. OCTOPUZ offers a powerful, flexible and customizable environment where users can program multiple robots simultaneously without interrupting production.
